Title | A novel distal upstream hypoxia response element regulating oxygen-dependent erythropoietin gene expression
---|---
First author | Federica Storti

According to the International Committee of Medical Journal Editors (ICMJE) ([http://www.icmje.org/ethical_1author.html](http://www.icmje.org/ethical_1author.html)):

“Authorship credit should be based on: 1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data; 2) drafting the article or revising it critically for important intellectual content; and 3) final approval of the version to be published. Authors should meet conditions 1, 2 and 3. Acquisition of funding, collection of data, or general supervision of the research group alone does not constitute authorship”.

The responsible author(s) of this manuscript confirm(s) that all persons designated as authors qualify for authorship, and that each author has participated sufficiently in the work to take public responsibility for appropriate portions of the content.

Specific contributions of each author are listed on page 2 of this document.

**Responsible author:**

*author responsible for the integrity of the work as a whole*

Name: David Hoogewijs
Institute: University of Zürich, Institute of Physiology
e-mail: david.hoogewijs@access.uzh.ch
Author contributions (maximum 1 page):

Please describe the contributions of each author, indicating who was responsible for each part of the study and the preparation of the manuscript (collection of data, experiments, data analysis, generation of figures, collection of images, interpretation of data, preparation of the text, etc.)

Federica Storti, Sara Santambrogio, Lisa Crowther, Teresa Otto and David Hoogewijs designed research, performed research and analyzed data; Sara Santambrogio and Federica Storti generated the figures; Irene Abreu-Rodriguez and Muriel Kaufmann performed research and analyzed data; Cheng-Jun Hu provided essential tools; Christof Dame and Joachim Fandrey provided tools and critically reviewed the paper; Roland H. Wenger designed research and critically reviewed the paper; David Hoogewijs supervised the study and wrote the paper. All authors approved the final version of the manuscript.
