RNA sequencing reveals a KMT2A-MYH11 fusion in MDS and AML

First author  PJM Valk

According to the International Committee of Medical Journal Editors (ICMJE) (http://www.icmje.org/ethical_1author.html):

“Authorship credit should be based on: 1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data; 2) drafting the article or revising it critically for important intellectual content; and 3) final approval of the version to be published. Authors should meet conditions 1, 2 and 3. Acquisition of funding, collection of data, or general supervision of the research group alone does not constitute authorship”.

The responsible author of this manuscript confirms that all persons designated as authors qualify for authorship, and that each author has participated sufficiently in the work to take public responsibility for appropriate portions of the content.

Author contributions
Please describe the contributions of each author, indicating who was responsible for each part of the study and the preparation of the manuscript (collection of data, experiments, data analysis, generation of figures, interpretation of data, preparation of the text, etc.) :

Mathijs Sanders: Performed research, analyzed data and wrote paper.
Francois Kavelaars: Performed research and analyzed data.
Annelieke Zeilemaker: Performed research and analyzed data.
Adil Al Hinai: Performed research and analyzed data.
Saman Abbas: Performed research and analyzed data.
Berna Beverloo: Performed research and analyzed data.
Kirsten van Lom: Performed research, analyzed data and wrote paper.
Peter Valk: Designed and performed research, analyzed data and wrote paper.
